

DeHavilland Data API

The market's most accurate political stakeholders information, integrated seamlessly with your system.

Our Data

Unrivalled details of 25,000 political stakeholders, from Parliament and the devolved assemblies, to local councils, and the EU.

Our API

Automatically plug our data into your CRM system. No more spreadsheets, no more manual uploads. Just 100% accurate, GDPR-compliant data.

Your CRM

Streamline your stakeholder engagement by querying our data as often as you want, create reports, track history and more.

DeHavilland Data API

What is an API?

An API is a program that allows two separate applications to automatically communicate with each other – in this case linking DeHavilland’s database of political stakeholders with your CRM.

What does it give me?

Our **PeoplePoint database** provides unrivalled detail on political stakeholders from Westminster to the devolved assemblies, and with the recent launch of our **Local Councillor database**, includes around 25,000 profiles, with full contact details and political appointments.

No matter what system you use, your developers can easily plug in our API, and set it up to update with our latest data as often and as specifically as you need.

DeHavilland

How will it help me?

- Work more **efficiently** – no more manual uploads, no more spreadsheets, and no more duplicating tasks across multiple applications.
- Work **smarter** – query only the data you require, as often as you need it.
- **Reduce errors** – make sure you’re always working with up-to-date information, maintained by our dedicated team.
- Reduce the risk of breaching **GDPR**.

The technical stuff

The API provides RESTful API calls to fetch DeHavilland data in JSON format.

It supports four functions: a full database GET request, an API status check, fetching a single profile, and a full search function by any fields.

DeHavilland Data API

We offer three solutions for integrating our data. Combine Standard or Premium UK data with our EU data for a full spectrum of political stakeholders.

Standard UK Data API

- UK PeoplePoint: MPs, Peers, Devolved Assemblies, SpAds, and Local Councillors
- Includes all contact details, political appointments, and electoral information

Premium UK Data API

- Additional biographical information by DeHavilland, including policy interests, life before Parliament, personal life, and photographs

EU Data API

- EU PeoplePoint: all MEPs and European Commissioners
- Includes all contact details and political appointments
